## ABOUT US

Since the beginning of production until today, the company has been systematically developing the production of EUX shutters and accessories. As a result, in the EUX offer you can find various models of pivoting, harmonica and sliding shades that are adjusted to modern and traditional architecture. All EUX products are liable control and have EU Declaration of Conformity for **CE marking according to EN 13659**.

We present our success daily through more than a thousand of regular clients located through more than eight export markets. To our clients and partners we guarantee top speed and quality work with more than eighty professional and experienced employees. EUX represents a brand that you can confidently include and apply in your own offer.

Our development plans are oriented towards a strong export with an emphasis on strengthening the position in the markets of the region where the company operates. High expectations for the achievement of the aimed goal are based on rich experience and motivated human resources, creatively directed towards the development of society.

The long-term direction towards the production of quality EUX accessories and shutters, as well as fulfilling the wishes and needs of customers, ensured the company's high position as a manufacturer of fittings and aluminium shutters in the region.

“ *We believe our team is strong enough to become your partner as well* ”

Contact us with full confidence if you are looking for advancement so we can achieve our common goals together!

**EUX has chosen aluminium as the main component of its production** because it can be shaped into any size and shape which makes it suitable for creating various dimensions of the final product.

The lightness of the material itself enables an elegant and aesthetically attractive appearance in any shape.

Aluminium made shades provide an excellent sound and thermal insulation because of the high quality structure of the material in the final product.

Organization represents one of the fundamental elements of any production, and with aluminium joinery it has a key role due to a dynamic and time-consuming process of work, which includes both production and final delivery of finished products.

**Aluminium is a resilient and durable element** which enables more permanent solutions for various joinery elements, which among other things includes shutters.

Aluminium can be almost completely recycled, even up to 100 %. The aesthetics is one of the advantages of aluminium joinery since aluminium enables manufacturing of more elegant and more pleasant product solutions and shapes.

## PRODUCTION

Architects and engineers consider aluminium to be one of the best solutions for use in any form of construction. Its durability, corrosion resistance and lightness make it a fundamental material in industry. Aluminium is the ideal solution for thermally demanding tasks; it is highly fire resistant and requires low maintenance.

Due to its specific structure, aluminium provides exceptional durability and the strength of the final product, thus representing a **more durable solution** that requires very little maintenance compared to other materials. Durability is also an important economic factor when choosing ALU joinery.

*“The production of EUX shutters is completely certified and implemented by applying the most modern software solutions with application of high quality production facilities.”*

We developed the EUX shutter to meet various aesthetic and functional requirements in accordance with traditional and modern constructions that are applied in individual areas. We have decided to offer you **security, durability and technical advantage**.

# EUX

## ALUMINIUM SHUTTERS

### AESTHETICS & POSSIBILITIES

#### EUX shutters offer numerous solutions

EUX aluminium shutters offer numerous solutions no matter if the architecture in question is modern or traditional. Various AUX aluminium shutter models can respond even to the strictest architectural demands. If modern architecture is concerned, that is the territory of sliding and folding shutter models, models that are meant to be installed on a Styrofoam facade or shutter without a trim which are installed directly on the window frame.

In traditional architecture first place goes to the rustic aluminium shutter models with their “Dalmatian and Istrian shutters” variations while folding shutter systems “Padovana” and “Vicentina” offer the possibility of installation with or without a frame directly on the stone joist.

#### EUX shutters offer more assembling possibilities

EUX aluminium model shutters offer more installation options. If there is an adequate surface, they can be installed on the edge of the facade with their frame. AUX shutters with a frame offer the solution for deep window heads with Styrofoam insulation, and are installed right next to the window itself, without leaving an empty space between the window and the shutters. In several models of AUX shutters with a frame, it's possible to install a vertical or horizontal mosquito net. The models of AUX shutters without a frame can be installed directly on the window jamb regardless if it is a PVC, wooden or aluminium window.

The main advantage when installing AUX shutter with a frame is that it offers the possibility to install a mosquito net in the shutter frame and to have it affixed to the window frame. This means that a significant amount of assembly time on the subject has been saved because the preliminary work, that the AUX shutters offer, has been done.

#### EUX accessories

While producing AUX shutters we use high-quality AUX accessories, such as hinges and rustic hinges which are distinguished from other similar products on the market by the best anticorrosive protection.

01

**ZARIA**

Facade shutter with a frame

## CLASSICAL

Zaria is a shutter model with a 45 mm thick frame which suits any type of architecture with its straight lines. The Zaria shutter offers the possibility of performance of fixed oval louvers in a semi-open position or moveable louvers which can regulate the entry of the light into space.

Besides their primary shading and anti-theft safety function, they have a very important aesthetic function on each object.

Zaria is installed on the edge of the facade with its facade frame.

## Zaria facade R40 shutter

### Horizontal cross-section

Multiple versions of the "Z" frame with a 22 mm, 50 mm and 70 mm central crossbar are available. It can be inserted into the window head with an "L" jamb without the central crossbar and with an adequate hinge; it is possible to set the offset of the sash.

Sash offset exists in two versions: a 30 mm and a 70 mm offset from the trim of the shutter.

The shutter model is available with diverse opening options, from classical swing shutter wings to folding shutter wings and offset shutter wings assisted by telescopic window hinges.

Facade aluminium shutters Zaria are classical EUX aluminium shutters. They are produced as the main product with a classical shutter appearance and shape but with the emphasis on the aesthetics with which it contributes to any building.

**Shading function**

**Anti-theft protection**

**Aesthetics**

02

# AURORA

EUX facade shutter with a frame

## STYLISH

Aurora is a shutter model with rounded lines which represents a balanced compromise between a traditional rustic shutter style and a modern shutter style with moveable louvers.

Therefore, Aurora is a shutter model that can adjust to all modern and traditional architecture living styles.

## Aurora EUX facade shutter

### Horizontal cross-section

Aurora shutter with a rounded "Z" frame is installed on the edge of the facade. The central crossbar is 30 mm in length. This type of shutter can be installed with a "Maco" type of overhead hinges or hidden hinges.

The opening system is designed the same as on all traditional wooden shutters, and it is made with a rustic Maco handle and a metal bar.

It enables various swing and folding shutter wing options, frames on all 4 sides or just on 3 sides in which case at the bottom of the shutter wing a brush is placed to prevent the light from passing through.

It is available with fixed or moveable louvers or with a flat panel.

Rounded aluminium facade shutters Aurora are a version of a traditional shutter. They are produced to represent an architectural application and adaptability to both modern and traditional designer solutions.

**Shading function**

**Adaptability**

**Aesthetics**

03

# DINATA

Shutter with a frame and a built-in mosquito net

## BUILT-IN

EUX Dinata shutter with a frame offers the possibility of installation on a Styrofoam facade. It is affixed with its trim to the window frame, thereby leaving no empty space between the window and the shutter. It is possible to install a vertical or a horizontal mosquito net into the shutter trim.

With its robust frame and a swing shutter wing design, it can be adjusted to suit the most demanding conditions of modern and traditional construction.

Dinata is available in options with fixed or moveable louvers or with a flat panel shutters.

## Dinata shutter with a frame

### Horizontal cross-section

Dinata shutters offer two types of frame. The 50 x 70 mm frame is intended for the mosquito net installation. The 30 x 45 mm frame is intended for thinner Styrofoam insulations and it cannot be installed with a mosquito net.

Both trim dimensions offer the possibility of installation of a 15 mm high window sill with a rubber gasket to prevent the light from passing through.

Both trim versions offer the possibility of a classic swing or a folding shutter wings.

Shutters with a mosquito net are aluminium shutters of exceptional quality which have a possibility of pest protection and which provide a carefree environment in summer!

**Adaptability**

**Mosquito net**

**Robust design**

04

# FORTUNA

Shutter with a frame and an integrated mosquito net

## INTEGRATED

Fortuna is a shutter with a 55x83 mm trim that is installed to the window frame and thereby leaving no empty space between the window and the shutter.

It is possible to integrate a vertical or a horizontal mosquito net into the trim which is completely aligned with the shutter frame and it can be ordered in diverse wood imitation RAL colours.

Fortuna is available with fixed and moveable louvers or with a flat panel, with classic swing or folding shutter wings.

## Fortuna shutter with a frame

### Horizontal cross-section

Fortuna shutter has a 55x83 mm frame with a space intended for the installation of a mosquito net. The 55x83 mm shutter frame is available with a cover that offers the possibility of a subsequent mosquito net installation.

The cover can easily be removed and the mosquito net can be installed on its place.

The 55x83 mm frame offers the possibility of installation of a short 15 mm sill with a rubber gasket to prevent the light from passing through.

Shutters with an integrated mosquito net Fortuna are shutters that allow subsequent modifications and integration of a mosquito net. Enjoy a carefree summer!

**Shading function**

**Upgradability**

**Mosquito net**

05

**GERAS**

Frameless shutter installed directly on the stone joist

## RUSTIC

Geras rustic shutter is a model without a frame, installed directly on the stone joist. The 40 mm thick shutter wing has a rubber gasket that is placed against the stone surface which prevents the light from passing through.

With the appropriate hinge the shutter is affixed directly on the stone surface without a trim.

It is available with fixed or moveable louvers or with flat panels. It offers the classic wing or folding shutter wing option.

## Geras shutter on a stone joist

### Horizontal cross section

Geras shutter is installed directly on the stone. The central crossbar is 17 mm long and it has a groove for the seal.

The shutter can be installed with “Maco” overhead hinges or with hidden hinges. The shutter model offers the possibility of making a swing or folding shutter wings with moveable and fixed louvers or a flat panel.

Aluminium rustic shutters without a frame are a unique choice for all rustic architectural forms. The possibilities of installation facilitate the implementation of shutters even on stone and other traditional buildings.

**Shading function**

**Simple installation**

**Design possibilities**

06

**GAIA**

EUX rounded shutter

## ROUNDED

Gaia is a shutter model which fits perfectly with its rounded lines to the traditional architecture. It is installed directly on the edge of the facade.

It enables the classic swing and folding shutter wing option. It is available with fixed or moveable louvers or with a flat panel.

The shutter on the picture is made in the wood imitation colour which accentuates best its rounded lines.

## Gaia rounded shutter

### Horizontal cross-section

Gaia rounded shutter with a frame is intended to be installed on the edge of the facade.

Gaia is a shutter model with curved frame and shutter wing lines. The shutter has a "Z" trim with a central 40 mm long crossbar.

It is available with swing or folding shutter wings and offers the possibility of having fixed or moveable louvers or flat panels.

Rounded aluminium shutters are a perfect solution for all designer and architectural projects which aim to accentuate the traditional lines and other elements of the building.

**High quality**

**Adaptability**

**Aesthetics**

07

**PERUN**

Istrian / Dalmatian shutter

## TRADITIONAL

Perun is a typical shutter in the Mediterranean areas. It is characterized by a flat panel with 60 mm wide vertical lines, completely visible both from the inside and the outside. Because of their charm in the Adriatic, aluminium shutters are called "Istrian shutters" or "Dalmatian shutters".

Besides their functionality, they fit perfectly on old stone houses and are an excellent fit for any rustic design. They are made of the most quality aluminium-plastic materials and are very easy to maintain, Perun offers the classic swing and folding shutter option.

### Perun shutter

#### Horizontal cross-section

Perun shutters can be installed with or without a frame directly on the stone joist. Besides the classic wing shutters, the system enables the possibility of coming with diverse folding shutter versions such as "alla Padovana" and "alla Vicentina".

They are available with swing and folding shutter wings or with flat panels with horizontal or vertical lines.

The model offers multiple variations and opening systems.

Flat panel or Dalmatian shutters will bring some charm to your rustic buildings. It will increase the value and beauty of your real estate!

**High quality**

**Rustic design**

**Low maintenance**

08

# RUSTICA

Pannelled shutter without visible wing edges

## MEDITERRANEAN

The flat panel shutter has no visible wing edges but shows only the boards just like the traditional wooden shutters. This model of aluminium flat panel shutter offers the possibility of installation of horizontal lines on the inside and vertical lines on the outside.

The space between the inside and the outside panel can be filled with a 24 mm Styrofoam insulation which increases both thermal and sound insulation. They are made of quality aluminium profiles with "Sea side" plastic protection for sea and salt conditions.

## Rustica shutter

### Horizontal cross-section

Flat panel aluminium shutter Rustica offers the possibility of installation with or without the frame directly on the stone.

Apart from the classic swing wing shutter, this model offers the possibility of multiple folding wings such as "all Padovana" and "alla Vicentina".

Flat panel shutter is an excellent choice for traditional stone houses which possess an enchanting beauty. Restore the Mediterranean spirit of your real estate and decorate it with flat panel aluminium shutter Rustica.

**Mediterranean charm**

**Sea side protection**

**Increased insulation**

09

# STORICA

Traditional pannelled shutter with reinforcement

## COMBINED

Storica is a shutter model that has no visible wing edges but shows only the boards just like the traditional wooden shutters. It is characterized by additional reinforcement on the inside which has both a functional and aesthetic note.

The shutter has a flat panel which can be installed with horizontal and vertical lines. Storica offers the possibility of installation with its own frame or without the frame directly to the stone. The shutters are made of quality aluminium panels and require low maintenance.

## Storica panel shutter

### Horizontal cross-section

Storica panel shutter enables the installation with its own frame or without the frame directly to the stone.

Apart from classical swing wing shutters this model also offers the possibility of folding opening such as "alla Padovana" or "alla Vicentina".

The uniqueness of this model will please all enthusiasts of traditional details. If you wish to have something special and different, the Storica model will give a special note to your real estate.

**Traditional charm**

**Rustic design**

**Aesthetics**

10

# ARTEMIS

Shutter installed directly on the window jamb

## DIRECTLY

Artemis shutter is a model without a frame that is installed directly onto the window frame, whether it's PVC, aluminium, or a wooden window.

A shutter without a frame can be easily adapted to diverse living conditions with its simplicity and thereby complete the aesthetics of every object.

It is available with fixed or moveable louvers or with flat panels. Besides from the classic swing shutters, it is possible to have folding wings.

## Artemis shutters without a frame

### Horizontal cross-section

Artemis shutter without a frame offers the possibility of installation directly onto the window frame.

The advantage of this model is that there is no shutter installation on the building. Instead, the shutter is affixed directly to the window frame due to the previous preparatory work on the PVC window.

This shutter model offers the possibility of installation on Styrofoam facades up to 210 mm thick, but also the possibility of installation before the Styrofoam facade has been set up.

Shutters without the frame Artemis decrease the assembly and installation phases and steps during the implementation and installation of shutters on buildings.

**Comprehensive solution**

**Easy installation**

**Aesthetics**

11

# HARMONIA

EUX folding sliding shutters

## ELEGANT

Folding sliding shutters are an ideal solution for large panoramic openings. They are a very important detail in the modern architecture.

They offer the possibility of diverse opening options with odd and even shutter wings as well as the possibility of locking.

It is possible to install the lower slide rail as an overhead or buried version.

### Folding sliding shutter

#### Vertical cross-section

Folding sliding shutters offer the possibility of having an unlimited number of shutter wings. With this system overload is impossible because each shutter wing has its own hinge.

The Harmonia model offers a wide range of flat panels such as moveable or fixed louvers, perforated tin, corrugated tin, Funder Max panels and various board imitations.

Folding sliding shutters Harmonia with their different possibilities of execution and adaptability in implementation offer a unique experience in performance of modern design solutions.

**Unlimited number of shutter wings**

**Diversity of possibilities**

**Aesthetics**

12

**HERA**

Facade sliding shutters

## FUNCTIONALITY

EUX sliding shutters are a very important detail in modern architecture. They are the perfect solution for large openings.

Besides the very important aesthetics, they have a very good protective function. They are available with fixed or moveable louvers or with flat panels.

It is a common practice to install an electric drive for the opening and closing of EUX sliding shutters. They can come with only one sliding shutter wing or with multiple parallel sliding wings.

## Hera facade sliding shutters

### Vertical cross-section

The Hera model is a system of sliding shutters with top and bottom sliding rails which are installed on the facade above and below the opening.

The bottom rail can be installed as an overhang or embedded underneath. Such system allows for the installation of several parallel rails.

Sliding aluminium shutters with different options of implementation and increase in aesthetics of every building represent a unique choice in any architectural project.

**Unique solution**

**Protective function**

**Aesthetics**

13

**FLY**

EUX sliding shutter with a frame

## SIMPLICITY

Fly sliding shutter is a very simple and practical model of sliding systems which are installed on openings of larger dimensions.

They are often used for shading terraces, loggias or outside gazebos. Due to its functionality and simplicity they make a very important aesthetic detail on the facades of modern buildings.

Fly sliding shutters offer the possibility of installation of only one rail up to multiple odd or even rails depending on the architectural demands.

By using the handle, sliding wings can be closed on the inside in two positions and on the outside with a closing lever which allows the shutter to be pulled along the rails.

Panels of the sliding wings can be made with fixed or moveable louvers and different board imitations.

## Fly sliding shutters

Vertical cross-section

Due to its functionality and simplicity they are a very important aesthetic detail on the facades of modern buildings.

**Modern solution**

**Practical**

**Aesthetics**

Colours that are always available in our warehouse are white, brown, green, anthracite, grey, dark walnut and gold oak. For other colours of interest please send us an inquiry about availability and possibilities of purchase.

**Download the certificate on the quality of RAL colours →**

## RAL COLOUR OPTIONS

All our EUX shutters are available in different RAL colours and wood imitations with increased protection for seaside conditions (Qualicoat “Seaside”).

“*Our special collection includes shiny, matte and coarse colours, and among others, marble, antique and rustic effects.*”

RAL colours are obtained with a simple procedure that consists in “colouring” aluminium panels in all colours varieties of the RAL chart by using thermos-reactive polyester powder colours.

This type of final processing includes textured, metal-like and dotted finishing. The process of decoration of panels ensures high quality standards and high strength.

Aluminium profiles are coated with a layer of powder which by using special automated applicators creates tree rings.

# HANDLES FOR SHUTTERS

**1** TYPE 6028 – Standard handle

EUX shutters offer several systems for opening and closing of wings from the **modern semi-olive** to **rustic handles** with a metal bar.
